The Epson FX-890A

Global imaging and printing leader, Epson, announces a new addition to its specialist dot-matrix printer family – the FX-890A – developed specifically to address the needs of airlines and airport operators.

Based on Epson's proven 9-pin dot-matrix technology, the FX-890A is built for reliability, making it the ideal printer for mission-critical documents such as passenger manifests.

With the needs of the airport environment in mind, it has a rugged build with a shock-resistant cover and sheet feeder, and a heavy-duty, reinforced acrylic tear-off bar that is independent of the cover for durability and ease of replacement.

One of the fastest printers in its class, the FX-890A prints up to 680cps at 12cpi in ultra-high-speed draft mode. It can also

handle up to seven-part forms, enabling it to deliver passenger manifests and other important documents quickly and efficiently.
